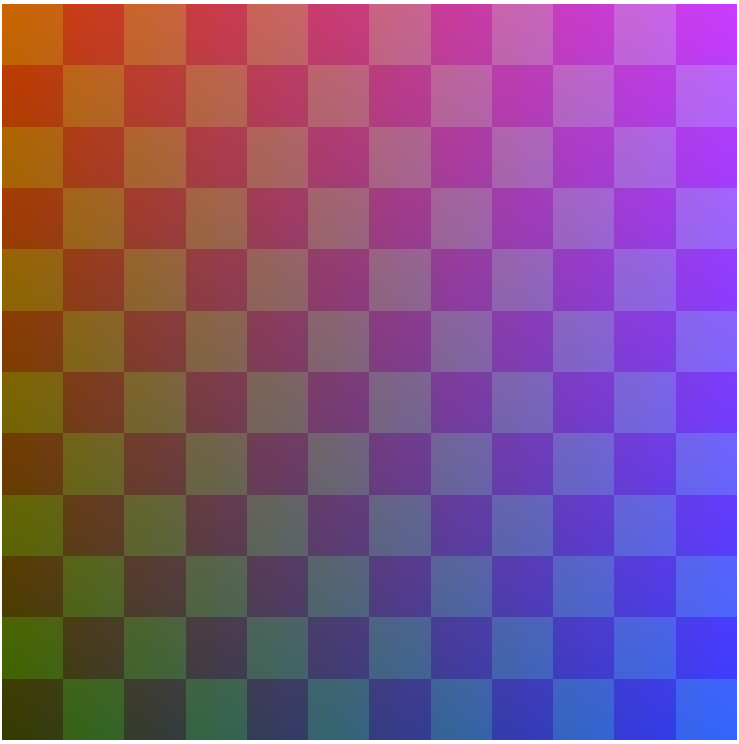
The reader's field notes

This report is written in Markdown and set by Lamina PDF. It uses every construct the builder reads: **strong** and emphasised words, `inline code`, ~~struck-out text~~, links to the website and to a later section, and a footnote.[1]

Contents of a day

A reader opens a file, searches it, prints a page and closes it again. Each step stays on the device.
This second line follows a hard break, in the same paragraph.

1 Offline here means that no part of a file is sent over the network.



Numbers

Month	Files opened	Pages printed
January	120	40
February	135	52
March	150	61
April	162	58
May	171	66

Month	Files opened	Pages printed
June	180	70
July	176	64
August	190	72
September	214	80
October	240	91
November	275	104
December	310	118

The table above runs across pages when it doesn't fit, and its header row repeats.

What people asked for

1. Search that finds words in scanned pages
2. Printing that keeps the page size
3. Signing without an account

[x] Open files without a network

[ ] Fill in forms

[ ] Compare two versions

In their words

> People don't want their files to leave the computer. They want the reader to work on a plane, in a hospital and at home in the same way.

— a reader, writing to the team

Other languages

The reader is used in many languages. Here is the same sentence in Arabic and in Hindi.

يعمل القارئ دون اتصال بالشبكة، فتُفتح الملفات وتُقرأ وتُبحث على الجهاز نفسه.

नमस्ते दुनिया। हिन्दी पाठ का परीक्षण।

What comes next

The next release adds forms. A short program shows how a file is opened:

```
let doc = Document::open_bytes(bytes,
OpenOptions::default())?;
println!("{} pages", doc.page_count()?);
```
